Reverse Engineering of Competence Profiles for Public Service Education

Thomas Hemker¹, Robert Müller-Török², Nina Schäfer³

Introduction

- Ensuring appropriate education for coming professionals as matter of utmost significance
- Most employees facing digital transformation are civil servants with bachelor's degree in some sort of public management

Quantitative analysis of ICT topics

- On average, less than one working week of lessons to teach ICT competences
- Some do not even teach one hour

Research questions:

- 1. How many hours are digital skills taught in each of the degree programs?
- 2. Which of the taught digital skills are part of the basic skills according to the ICDL Germany and which go beyond?

Heatmapping - Hours of time heatmapped per row

Qualitative analysis of ICT topics based on ICDL Germany

- ICDL Germany = International Certification of Digital Literacy
- Defines certain modules and their contents, which are considered basic ICT skills
- About half of the topics are basic skills according to ICDL (79 of 162 topics)

UNIVERSITY OF APPLIED SCIENCES

Clustering ICT topics beyond ICDL basics

- Approximately half of the topics (83 of 162) exceed basic skills according to the ICDL
- Clustered into eight different dimensions

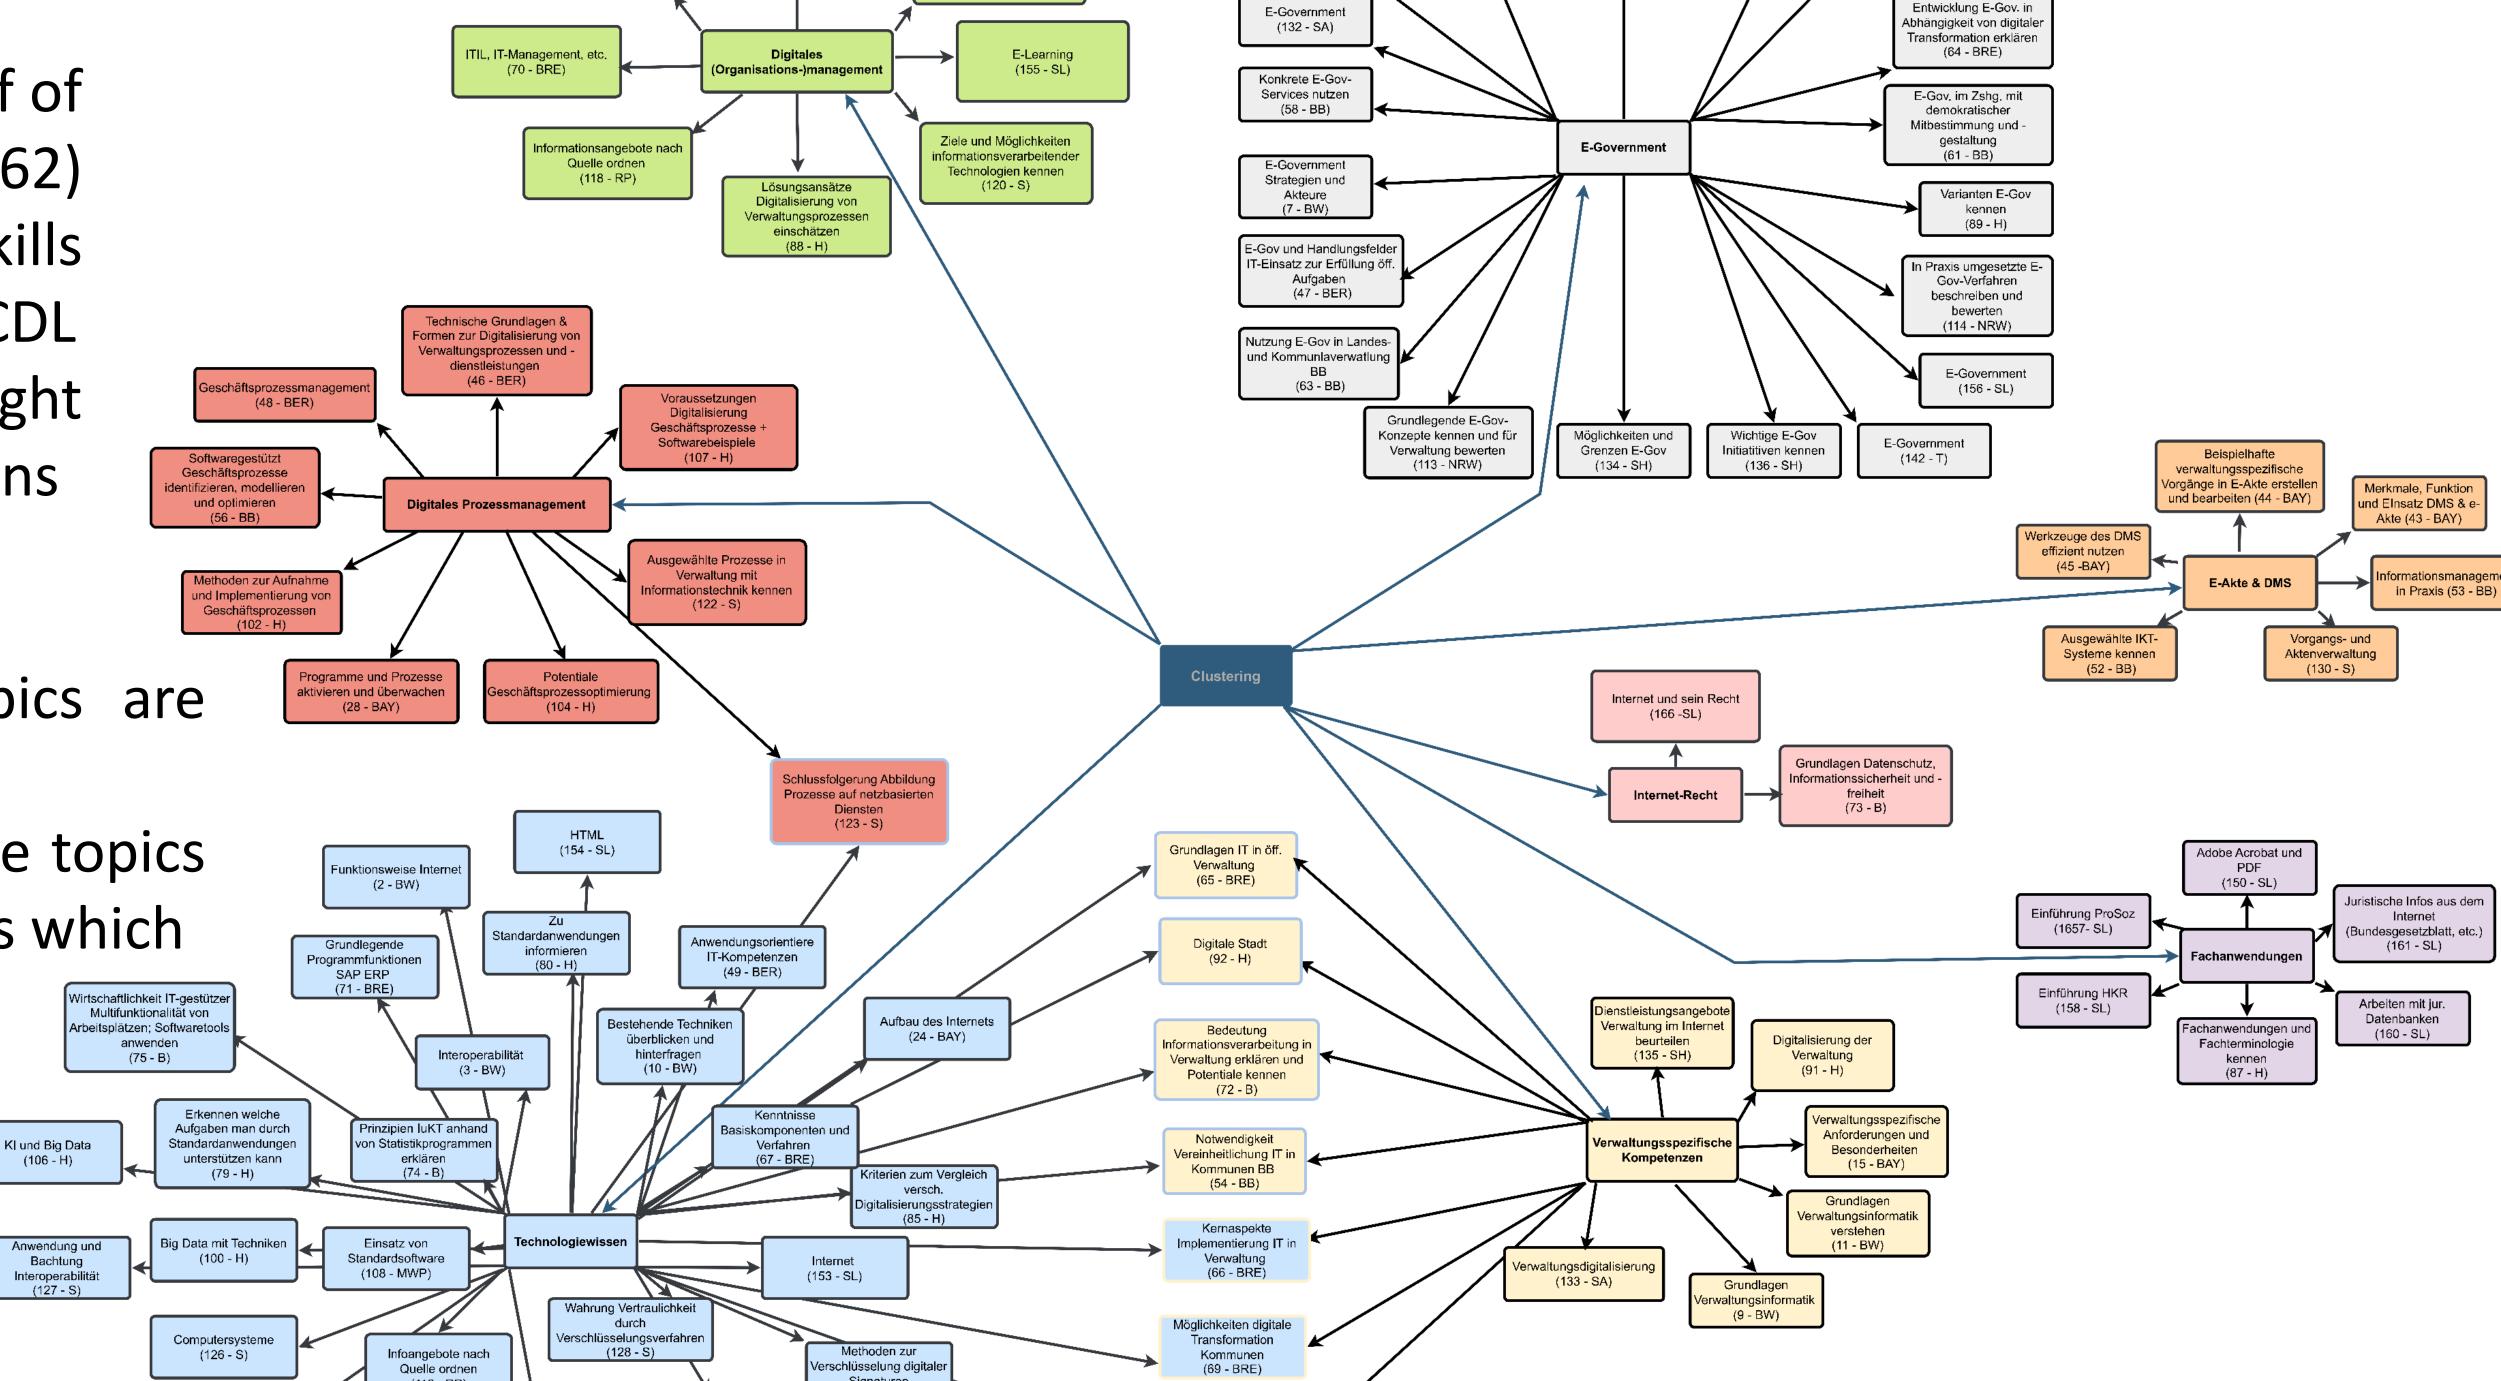

Conclusion

school

 Only few ICT topics are taught

Bachtung

About half of these topics are basic ICDL skills which should already be known from secondary
